Replit Usage Evidence

Team: RM15 Refunders
Project: StockLink
Evidence type: Public live deployment URL

Live prototype: https://stock-link.replit.app/

We used Replit to develop, run and publish the StockLink prototype. The publicly accessible deployment includes Overview, Orders, Inventory, Deliveries and Activity views.

The prototype uses synthetic demonstration data stored locally in the browser. It demonstrates order-linked inventory forecasts, stock-risk explanations and human-reviewed decisions. No live AI model, supplier messaging or automatic purchasing is integrated.
