Rotaract Club of Xiamen University Malaysia | Rotary Club of Kuala Lumpur Dynamics | Rotary Club of Tun Razak Exchange

SDC Hackathon

Technical Tools Declaration

Hosted by Xiamen University Malaysia (XMUM) AI Club
Submission Deadline: 25 October 2026

Instructions: Declare every API, cloud service, AI tool, dataset, model, and sponsor resource your team used to build the project. Complete every section; where a category does not apply, tick "No" or write "None" – do not leave it blank. Submit as a single PDF document named "SDC2026_TeamName_TechDeclaration.pdf" together with your project submission. Undeclared third-party resources discovered at judging may affect your score or eligibility.

SDC HACKATHON 2026

Technical & Tools Declaration

Hosted by Xiamen University Malaysia (XMUM) AI Club

Submission Deadline: 25 October 2026

Instructions: Declare every API, cloud service, AI tool, dataset, model, and sponsor resource your team used to build the project. Complete every section; where a category does not apply, tick "No" or write "None" – do not leave it blank. Submit as a single PDF document named "SDC2026_TeamName_TechDeclaration.pdf" together with your project submission. Undeclared third-party resources discovered at judging may affect your score or eligibility.

1. Team & Project Overview

Team Name	RM15 Refunders
Project / Solution Name	StockLink
Name (Leader)	Wang Yanfeng
Email & Phone (Leader)	CST2609066@xmu.edu.my 1114283707
University Affiliation(s)	Xiamen University Malaysia
Live Prototype URL	https://stock-link.replit.app/
Code Repository URL (public / access granted to judges)	https://github.com/RM15-Refunders/StockLink

2. Architecture & Technology Stack

2.1 System Architecture Overview

Describe how the components declared in this document connect end-to-end (e.g., user interface → backend → AI model/API → database → cloud hosting). Attach a system block diagram as an appendix if available.

[Maximum 200 words]

StockLink is a React/TypeScript single-page prototype built with Vite and published as a static site on Replit. The current app stores demo state in the visitor's browser (localStorage); a deterministic rules-based calculation estimates stock risk from sample/on-screen inventory, confirmed orders, baseline demand, recipe assumptions and expected deliveries. Users review and confirm changes; an activity page shows local actions. There is no application server, cloud database, authentication, external API, embedded AI model, live POS, messaging, payment or supplier integration. The published prototype is for demonstration and uses synthetic/sample data. A future AI-assisted message-to-draft-order feature is only a proposal and is not present in this version.

2.2 Languages, Frameworks & Libraries

List the main programming languages, frameworks, and third-party libraries that your team did not create. Open-source use is permitted provided it is declared and properly licensed/attributed.

Name & Version	Purpose in Project	License
TypeScript (version not recorded)	Application logic	N/A
React / React DOM 19.1.0	UI framework	MIT
Vite 7.3.7	Build and static bundle	MIT
Tailwind CSS 4.3.3	Styling	MIT
Recharts ^2.15.2; Lucide React 0.545.0; Wouter ^3.3.5	Charts, icons, routing	MIT; ISC; Unlicense

3. APIs & Cloud Services

3.1 External APIs

List every external API your solution calls (GenAI, maps, payments, messaging, data feeds, etc.). Do not include API keys or secrets in this document.

API & Provider	Purpose in Project	Access Tier (free / paid / sponsor-provided)
None	N/A	N/A

The running app makes no external API calls.

3.2 Cloud Platforms & Deployment

List every cloud service used for hosting, storage, databases, authentication, or compute, and indicate how the prototype is deployed.

Service & Provider	Purpose in Project	Plan / Region
Replit Static Publish (Replit)	Hosts the public static prototype	Free plan; region shown in Replit as North America
Browser localStorage (visitor device)	Stores demo state locally	Local browser; no cloud storage

4. AI Tools, Models & Datasets

4.1 AI Models Used in the Solution

List every AI model embedded in or called by your application, including pre-trained, fine-tuned, and self-trained models.

Model & Version	Source / Provider	Usage (pre-trained / fine-tuned / self-trained)	License / Terms
None	N/A	N/A	N/A

No model is embedded in or called by the application.

4.2 Datasets

List all datasets used for training, fine-tuning, evaluation, or in the running application. State clearly if a dataset contains personal or sensitive data.

Dataset Name	Source / URL	Type (public / private / self-collected / synthetic)	License	Personal Data? (Y/N)
Synthetic/sample records bundled for demonstration	Created for prototype; no external source	Synthetic	Team-created demo data	N

4.3 AI-Assisted Development Tools

Tools used to help write code, design, content, or documentation (e.g., chat assistants, code completion tools, image generators). Declaring these tools does not reduce your score; undeclared use may.

Did your team use any generative-AI tool to help create code, design, text, or other project material?

✓ Yes ☐ No

Tool & Version	**Used For**	**Extent of Use (minor / moderate / major)**
ChatGPT (version not recorded)	Planning, drafting and project-content assistance	Moderate
OpenAI Codex (version not recorded)	Code assistance and implementation	Major
Replit Agent (version not recorded)	Code assistance, build and prototype iteration	Major

Briefly describe how your team reviewed, tested, and took responsibility for AI-generated output:

[Maximum 100 words]

We reviewed AI-assisted changes against the intended StockLink workflow and manually inspected the deployed pages. Replit reported that the TypeScript check and production build passed.We remain responsible for all submitted code and content. No independent user testing or measured accuracy evaluation has been completed; these are planned for Phase 2.

5. Sponsor-Provided Resources

Declare any official SDC sponsor-provided GenAI API, cloud credits, tools, mentoring, or data that your team used.

Did your project use any official SDC sponsor-provided resource?

✓Yes ☐ No

If yes, list them below:

Sponsor	**Resource (API / credits / platform / data)**	**How It Was Used in the Project**
SDC Hackathon organizers / XMUM AI Club	Replit voucher; mentor guidance	Voucher supported access to Replit; mentors advised the team. Exact credit amount/terms not recorded.

Was the sponsor resource essential to the core functionality of the prototype, or could it be replaced? Explain briefly:

[Maximum 100 words]

The Replit voucher enabled us to use Replit for development and static publishing; mentor guidance supported project decisions.
These resources helped with implementation and access, but they are replaceable: the front end can be built and hosted through another compatible development and static-hosting service.
No sponsor GenAI API, dataset or cloud API is integrated into the application.

6. Security, Privacy & Responsible Use

6.1 Data Handling & Privacy

What user or personal data does your application collect, store, or send to third-party services (including AI APIs)? How is it protected, and how long is it kept? State "No user data is collected" if applicable.

[Maximum 150 words]

The prototype collects no account, contact, payment or other personal data and sends no data to external services. It contains synthetic demo records. User changes are stored in localStorage in the current browser only and are not synchronized to a server; clearing browser storage removes them. Do not enter real customer or business data. The static host serves the application files; no backend or cloud database is configured.

6.2 Known Limitations & Risks

Identify the main technical limitations of your AI components (e.g., hallucination, bias, rate limits, dependency on a single provider) and any mitigation you have implemented.

[Maximum 150 words]

This is a demo using synthetic records and assumptions; its stock estimates are not validated forecasts and can be wrong if inputs or recipe/demand assumptions are wrong. There is no POS, supplier, messaging or live inventory integration, no multi-user synchronization, authentication or server backup. Rules are deterministic and explainable; no AI model is used in the app, so model hallucination is not a current risk. Human review is required before decisions. Validate with SMEs, measure error and time, and assess privacy/security before real deployment.

7. Compliance & Readiness Checklist

Tick all boxes that apply before submitting.

- ✓ All APIs, cloud services, AI tools, models, and datasets used in the project are declared in this document.
- ✓ All third-party code, datasets, and models are used in accordance with their licenses, and attribution is provided where required.
- ✓ No API keys, passwords, or other credentials are exposed in the code repository, prototype, or this document.
- ✓ Any use of generative-AI tools for development has been disclosed and reviewed by the team.
- ✓ Any use of official SDC sponsor resources has been declared in Section 5.
- ✓ The prototype described here is accessible to judges through the links provided in Section 1.
- ✓ All fields in this template have been completed within the word limits stated.

8. Declaration

By submitting this document, the team leader confirms that the information provided is complete and accurate to the best of the team's knowledge, and that every API, cloud service, AI tool, dataset, model, and sponsor resource used in the project has been declared.
